

Golf Club and Ball Marking and Alignment Device

ABSTRACT

A golf club and golf ball marking and alignment device **10** which provides a method to place identification and or other indicia on the surface of a golf club head **34** and golf ball **38**. The marking and alignment device **10** contains a well **14** that contains a self centering arc for a golf club head **34** and a golf club head centering band **22** that provide a central window to mark the central dorsal surface of a golf club head **34**. Marking and alignment device **10** also has a second well to accommodate a golf ball **38** and a golf ball cover **12** which has an opening **30** to allow for marking a golf ball with a variety of markings or symbols. Once a golf club head **34** and golf ball **38** are marked, the marking provide both identification and properties for users of the golf equipment.
